# Agenda (best guess)

SQL Mini-Lecture 20 minutes

HW4-1 Peer Review 30 minutes

HW4-1 Test Inspection 30 minutes

Static Analysis 30 minutes

At this point your laptops should be closed. Please get out a sheet of scrap paper.

#### **Before we start**

As the semester goes on, Thursdays become very unstructured "working days".

Nobody actually works for the whole two hours.

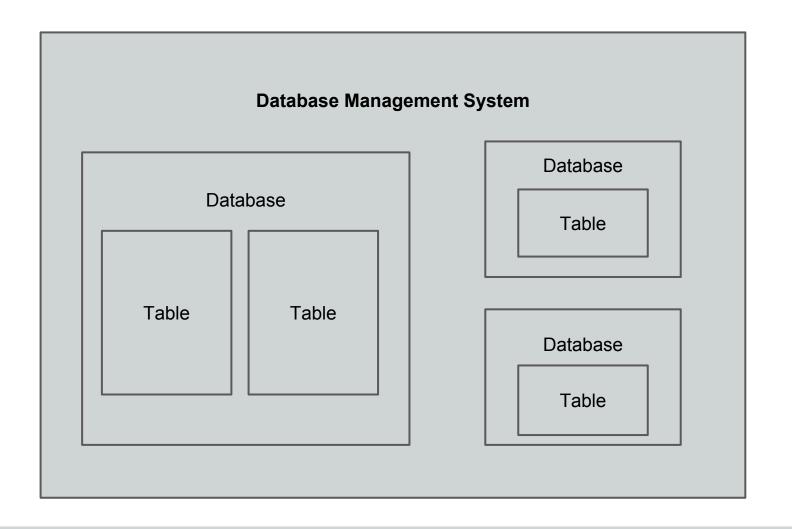

I'll take requests for technical "mini-lectures" to go over material that you either need for your projects or are just personally interested in.

## SQL (CSC 540-lite)

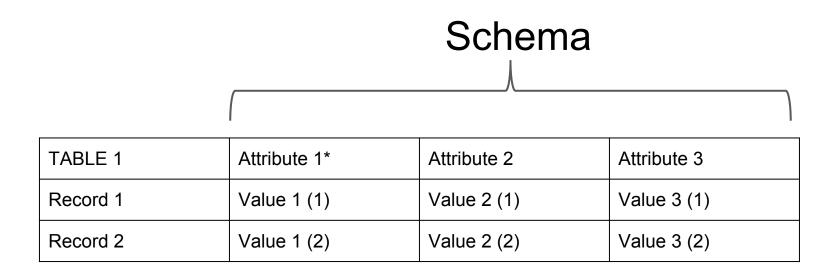

SQL (Structured Query Language) is a way of interacting with *Relational Database Management Systems*.

- MySQL
- SQLite
- Postgres

# The Taxonomy

### **Tables (Relations)**

A SELECT statement returns a table What would "SELECT Attribute 1 from Table 1" give you?

# **Entities**

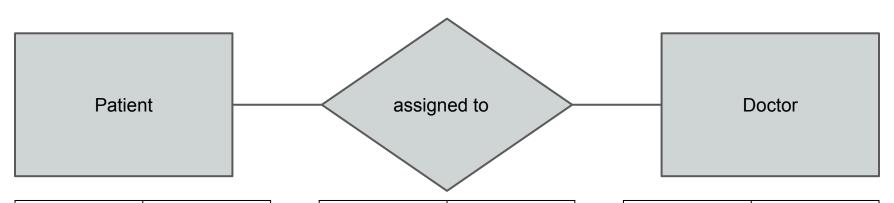

Patient

| MID | Name     |
|-----|----------|
| 1   | Sonic    |
| 2   | Tails    |
| 3   | Knuckles |

Doctor

| MID     | Name  |
|---------|-------|
| 9000001 | Mario |
| 9000002 | Luigi |
| 9000003 | Yoshi |

### **Entities**

| Patient MID | Name     |
|-------------|----------|
| 1           | Sonic    |
| 2           | Tails    |
| 3           | Knuckles |

| Patient MID | Doctor MID |
|-------------|------------|
| 1           | 9000001    |
| 1           | 9000002    |
| 2           | 9000003    |
| 3           | 9000001    |

| Doctor MID | Name  |
|------------|-------|
| 9000001    | Mario |
| 9000002    | Luigi |
| 9000003    | Yoshi |

# SELECT \* FROM patients <u>JOIN</u> "assigned to" ON Patient MID;

JOIN takes the cross product of two tables and keeps the rows where the "ON" values are equal

| Patient MID | Name     |
|-------------|----------|
| 1           | Sonic    |
| 2           | Tails    |
| 3           | Knuckles |

| Patient MID | Doctor MID |
|-------------|------------|
| 1           | 9000001    |
| 1           | 9000002    |
| 2           | 9000003    |
| 3           | 9000001    |

| Doctor MID | Name  |
|------------|-------|
| 9000001    | Mario |
| 9000002    | Luigi |
| 9000003    | Yoshi |

# SELECT \* FROM patients <u>JOIN</u> "assigned to" ON Patient MID;

| Patient<br>MID | Name     |
|----------------|----------|
| 1              | Sonic    |
| 2              | Tails    |
| 3              | Knuckles |

| Patient<br>MID | Doctor MID |
|----------------|------------|
| 1              | 9000001    |
| 1              | 9000002    |
| 2              | 9000003    |
| 3              | 9000001    |
|                |            |

|                | 1        |                |               |
|----------------|----------|----------------|---------------|
| Patient<br>MID | Name     | Patient<br>MID | Doctor<br>MID |
| 1              | Sonic    | 1              | 9000001       |
| 1              | Sonic    | 1              | 9000002       |
| 1              | Sonic    | 2              | 9000003       |
| 1              | Sonic    | 3              | 9000001       |
| 2              | Tails    | 1              | 9000001       |
| 2              | Tails    | 1              | 9000002       |
| 2              | Tails    | 2              | 9000003       |
| 2              | Tails    | 3              | 9000001       |
| 3              | Knuckles | 1              | 9000001       |
| 3              | Knuckles | 1              | 9000002       |
| 3              | Knuckles | 2              | 9000003       |
| 3              | Knuckles | 3              | 9000001       |

## **Bringing it Back**

What JOINS would you use to get a table containing just the names of each patient and assigned doctor together?

Which relations are you dealing with for HW4?

Why wouldn't putting the MIDs in a Commaseparated list work correctly?

Are there any other questions?

#### **HW4-1**

Today you will be doing a peer evaluation of another student's project document and running through their tests.

Go to the Lab 7 Moodle - the google form is the same rubric I'll be using to grade you

After this assignment, you know your grade!

### **Static Analysis**

Analysis of Source Code without running it

We'll be using "FindBugs" to... well... find bugs in iTrust

- install findbugs first
- then install AWARE

Find some bugs and let the TA know what you find.

# **Final Thoughts**

HW4-2 is due the Wednesday after Spring Break. That gives you three weeks!

Midterm is next Week - on Sunday Night, we'll meet in here from 6 to 9 PM to go over the study guide and answer questions.

Bring your course pack if you decide to join.
